## Event Report

Date: 28-11-2016

**Title** : Synthesis and Separation of Optically Pure Drugs and their Impurity Profiles  
**Speaker** : A.Raghurama Rao  
**Designation** : Professor, Kakatiya University, Warangal.  
**Qualification** : M.Pharm, PhD, Post-doc  
**Date of Seminar** : 26th November 2016

**Venue** : Seminar Hall, Aditya College of Pharmacy.

**Total number of participants:** 172

### **Description about the event:**

A.Raghurama Rao addressed the students of pharmacy about the general scheme is set for the estimation of the impurity of bulk drug substances by the rational use of chromatographic, spectroscopic and analytical techniques. The various parameters to be fulfilled in an impurity profile of drug substances are discussed. Impurity is defined as any substance coexisting with the original drug, such as starting material or intermediates or that is formed, due to any side reactions. The presence of these unwanted chemicals, even in small amount, may influence the efficacy and safety of the pharmaceutical products. Impurity profiling (i.e., the identity as well as the quantity of impurity in the pharmaceuticals), is now gaining critical attention from regulatory authorities. The different Pharmacopoeias, such as the British Pharmacopoeia (BP), United States Pharmacopeia (USP), and Indian Pharmacopoeia (IP) are slowly incorporating limits to allowable levels of impurities present in the APIs or formulations. The International Conference on Harmonization of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH) has also published guidelines for validation of methods for analyzing impurities in new drug substances, products, residual solvents and microbiological impurities.
