## Event Report

Date: 29-12-2021

Title : Role of IPR in Pharmaceutical Industry  
Speaker details : S.V.N. RAJU  
Designation : PhD  
Date : 27-12-2021  
Class of participants : B-Pharm, M -Pharm, Pharm-D  
Venue : Aditya College of pharmacy

Total number of participants: 105

### Description about the Event:

He explained about that the documents to be submitted to regulatory authorities have almost tripled in the last ten years. In addition, regulatory authorities now take much longer to approve a new drug. Consequently, the period of patent protection is reduced, resulting in the need of putting in extra efforts to earn enough profits. The situation may be more severe in the case of drugs developed through the biotechnology route especially those involving utilization of genes. It is likely that the industrialized world would soon start canvassing for longer protection for drugs. It is also possible that many governments would exercise more and more price control to meet public goals. This would on one hand emphasize the need for reduced cost of drug development, production, and marketing, and on the other hand, necessitate planning for lower profit margins so as to recover costs over a longer period. It is thus obvious that the drug industry has to wade through many conflicting requirements. Many different strategies have been evolved during the last 10 to 15 years for cost containment and trade advantage. Some of these are out sourcing of R&D activity, forming R&D partnerships and establishing strategic alliances. He explained about

The IPR protection works in numerous ways:

1. Provides fair and effective incentive for innovation
2. Protects Pharma companies against potential infringers
3. Provides strong enforcement tools for defending infringed patents
